1: REASONS FOR ACTION

Go | No Go

Problem: Children in Central Oregon have poor oral health, including cavities, tooth decay, and gum disease.

Aim: Improve Oral Health during the perinatal period and keep children cavity free

Boundaries: Central Oregon, pregnant women, children ages 0-5

2: INITIAL STATE

Go | No Go

- % of pregnant women with a dental visit
- 76% of 8th graders reported cavities
- Between 4.8% and 6.4% missed one or more hours of schools due to tooth/mouth pain
- % school children with untreated decay
- % of children with previous decay
- % of children with urgent dental care needs
- # medical clinics providing OH assessments and fluoride application

3: TARGET STATE:

Go | No Go

- Increased # of medical clinics providing OH assessments and fluoride application
- Decrease % of children with untreated decay, urgent care needs, and previous decay
- Increase % pregnant women receiving dental care during pregnancy

4: GAP ANALYSIS

Go | No Go

- Providers and pregnant women misinformed about safety, need, and appropriateness of receiving oral health care during pregnancy
- Lack of insurance for some pregnant women
- Lack of awareness by physical health providers, re: oral health * reimbursement and codes.
- Provider workflow & time constraints
- Clinical operational & system barriers
- Competing interests

5: SOLUTION APPROACH

Go | No Go

- Facilitate integration efforts in Primary Care settings
- Build interprofessional collaborations
- Leverage CHWs and Case Managers
- Educate providers (especially OB-GYN) about oral health, OHP OH benefits, etc.
- Collaborate with Perinatal program Care Coordinators
- Establish bi-directional referral systems between primary care and dental teams
- Connect with community programs and venues to target pediatric and perinatal populations

6: RAPID EXPERIMENTS

Go | No Go

- Lunch and learn with OBGYN, providers of all types
- More Care model
- Maternity teeth for two training

(See attachment for full descriptions)

7: COMPLETION PLAN
